# FLOWER POT PLATING GUIDE

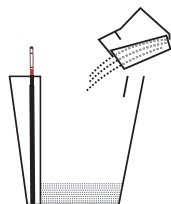

Insert the water indicator into the water level shaft of the inner tube

1

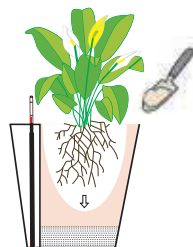

Pave the Stone or clay at the bottom of the inner tube

2

Put the plant into inner tube, and then filled with nutrient soil

3

At the first time, please be sure to follow common ways of watering, that is, watering the soil surface to flush the roots of plant and PH adjustment.

4

Pour the fertilizer into the bottom of pot

5

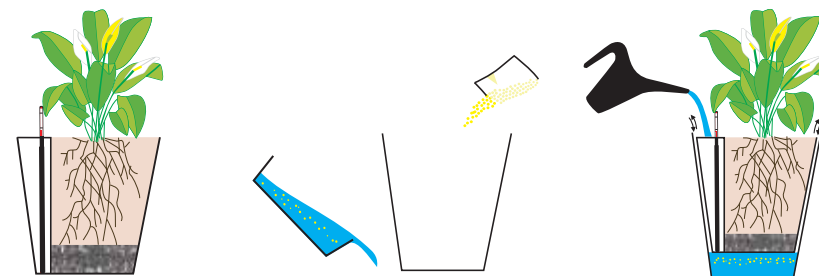

Put the inner tube into the pot and water from the water level shaft. Moreover, do not water so much that it over OPT.

6

After 28 days of the initial watering, the roots grow in good condition. Emptying the water reservoir, and watering the soil surface to flush the roots again, then pour the fertilizer into the bottom. Water from the water level shaft into the bottom, making the water level measurement mark reach to the OPT. And now your plants can not only be watered by self-watering system, but also the fertilizer contains the nutrients and many kinds of trace elements needed for plant growth, which can provide up to 3-6 months of nutrient supply.

## PLANT INDOOR & OUTDOOR

When the pot planted in indoor, you must tighten the plug at the bottom of pot.
