## A006 Forstner Bits

- Made of high carbon steel. Consisting of a centering tip which guides during the cut, 2 main cutting edges, and 2 radial cutting edges to plane off the material at the bottom of the hole.
- Right hand cutting, forged version.
- Forstner bits have no mechanism to clear chips from the hole, and must be pulled out periodically to do this.
- A forstner bit requires great force to push it into the material, so is normally used in drill presses or lathes rather than in portable drills.
- **Application:**  
For drilling exceedingly smooth-sided, precise, flat-bottomed holes in wood, veneered wooden boards, etc.

## B015 HSS Step Drill Bits

- Made of high speed steel, right hand cutting, cylindrical shank, with split-point.
- A single bit can be used for drilling a wide range of hole sizes, or for hole enlarging.
- Application:

Step bits are most commonly used in general construction and plumbing. One step bit can drill the entire range of holes necessary on a countertop, speeding up installation of fixtures. They are most commonly used on softer materials - plywood, particle board, drywall, acrylic, laminate, etc. They also can be used on very thin sheet metal, but metals tend to cause premature drill wear and dulling. An additional use of step bits is deburring holes left by other bits, as the sharp increase to the next step size allows the cutting edge to scrape burrs off the entry surface of the workpiece.

## B016 HSS Step Drill Bits, Titanium Nitride Coated

- Made of high speed steel, right hand cutting, cylindrical shank, with split-point.
- A single bit can be used for drilling a wide range of hole sizes, or for hole enlarging.
- Titanium nitride (TiN) coating improves lifetime.
- Application:

Step bits are most commonly used in general construction and plumbing. One step bit can drill the entire range of holes necessary on a countertop, speeding up installation of fixtures. They are most commonly used on softer materials - plywood, particle board, drywall, acrylic, laminate, etc. They also can be used on very thin sheet metal, but metals tend to cause premature drill wear and dulling. An additional use of step bits is deburring holes left by other bits, as the sharp increase to the next step size allows the cutting edge to scrape burrs off the entry surface of the workpiece.

## C005 Multi-purpose Drill Bits, Carbide Tipped

- Professional quality.
- Ground carbide tip for precise spot drilling, also reducing noise levels and drilling pressure.
- Extremely long life through special alloyed steel.
- Ideal for drilling through layers of different materials.
- Professional usage.
- Application:  
The bit for all materials like masonry, tile, wood, chipboard, metal and plastics.

## C008 Chisels, SDS-PLUS Shank With Round Shaft

- Heavy-duty quality.
- Chisels are made of high grade special steel and have a wear-resistant, shot-blasted surface finish.
- High removal capacity thanks to optimal weight distribution.
- Only used on machines with rotationstop facility.
- Application:  
For light chiselling and gouging application on concrete, masonry and natural stone.

### Pointed Chisel

Starts holes in concrete slabs, general chipping & breaking.

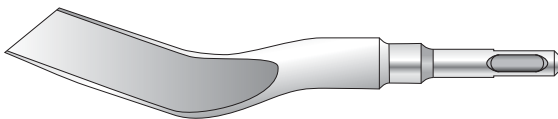

### Flat Chisel

For general chiseling and breaking work in brickwork, concrete and loose stone, for example when laying cables.

### Scaling Chisel

For removing large quantities of materials.

### Seam Tool

For the removal and cleaning of pointing in brickwork and mortar.

### Slotting Chisel

For slotting in concrete and masonry.

### Gauge

For cutting narrow channels into concrete.

### Angled Scraping Chisel

For easy removal of tiles (with ergonomically angled working end)

## E002 Bi-Metal Hole Saws with Variable Tothing

- HSS-cutting teeth welded on special-steel body, cutting teeth variable pitched (4/6 T.P.I) for less vibration, smoother cutting and less heat production during cutting.
- Application:  
Solid construction for drilling sheet metal, aluminium, plastic, wood, plywood, plastic boards etc.

## E005 Bi-Metal Hole Saws With Built-In Arbor

### APPLICATIONS:

- Tip teeth hardened for cutting any usual materials with a high wear resistance.
- Rugged one-piece construction eliminates the need for a separate arbor.
- For cutting steel, cast iron, aluminum, wood and plastics.

### FEATURES:

- Bi-metal construction.
- Special high speed steel cutting teeth welded to alloy steel body.
- Variable tooth pitch achieves easy but fast cutting with less efforts, less noise and increased life span.

## E006 Multi-Blades Hole Saws

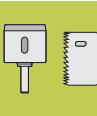

### APPLICATIONS:

- For drilling quickly and neatly holes in wood, plaster board, construction panels and plastics.

### FEATURES:

- Tungsten carbon steel saw blades.
- Special hardened saw teeth.
- Complete with metal locating plate, pilot drill bit.

## E004 Carbide Grip Hole Saws

- The hole saw is made of tough steel body with carbide grits bonded to the cutting edge.
- Very efficient at high speed, it cuts smooth holes and prevents binding action.
- Complete with locating plate and pilot drill bit.

### Application:

- For cutting ceramic, tile, brick wall, brick, breeze block and plasterboard.

## E007 Carbide Grit Down Light Hole Saws

### APPLICATIONS:

- For use on plaster, plasterboard, ceiling tiles etc.
- For most common sizes of down-lights.
- Cutting depth up to 30mm(1-3/16")

### FEATURES:

- These hole saws have a tough steel body with multiple carbide grits permanently bonded to the cutting edge.
- Very efficient at high speed, it prevents binding action and cuts smooth holes.
- Complete with arbor and TCT pilot drill bits.

## E008 HSS Hole Saws

### APPLICATIONS:

- For high precision drilling in metallic sheet.

### FEATURES:

- HSS cutting edges.
- Sharper tooth tip for easier cutting.
- Better chip clearance.
- Longer product life; teeth stay sharp longer.
- Exchangeable centering pilot drill.
- Exchangeable threaded arbor with three flatted shank.
- Overall length 75mm(2-61/64").

## E009 Carbide Grit Hole Saws, Gulleted

### APPLICATIONS:

- Ideal for cutting ceramics, fiberglass, cast iron and composites etc.
- Use for plumbing, construction, marine and aircraft applications.
- Separate arbors required.

### FEATURES:

- Tungsten carbide particles bonded to alloy steel back with a gulleted, snag resistant cutting edge.
- Super resistance to heat, wear and abrasion with shock resistance back.

## E010 Ceramic Tile Cutters, Carbide Tipped

### APPLICATIONS:

- Ideal for woodworkers, model builders, clockmakers and hobbyists.
- For precision circles and holes in sheet metal, brass, copper, aluminum, plastics, wood, and composition materials.

### FEATURES:

- Cuts the exact diameter you need anywhere from 25.4 to 152mm(1" to 6").
- Change from circle to wheel cutting by simply reversing the double ended blade.
- Cutting capacity: 25 to 152mm(1" to 6")

# Hole Cutting

## E011 Adjustable Circle Hole Cutter

E0110001

E0110001

### APPLICATIONS:

- For cutting plywood, laminates, composite boards, plastic, rubber and other soft materials.
- To adjust the size locate the inner edges of the blade holders against the size graduation.
- Not suitable for steel sheet or other metals.

### FEATURES:

- Alloy tool steel cutter blades and centre pilot drill bit.
- Graduated in metric and inch sizes.
- Cutting capacity: 30 to 120mm(1" to 5").
- Maximum thickness: 30mm.

E0110002

E0110002

### APPLICATIONS:

- For cutting wood, plywood, acrylic, laminates, composites, aluminium sheet, fiber cement board, plasterboard, hardboard, plastic, rubber, etc.
- To adjust the size locate the inner edges of the blade holders against the size graduation.
- Not suitable for steel sheet or other metals.

### FEATURES:

- Carbide tipped cutter blades and centre pilot drill bit.
- Graduated in metric and inch sizes.
- Cutting capacity: 30 to 200mm(1" to 8").

E0110003

E0110003

### APPLICATIONS:

- For cutting ceramic tile, laminates, composite boards, plastic and other abrasive materials.
- To adjust the size locate the inner edges of the blade holders against the size graduation.
- Not suitable for steel or other metals.

### FEATURES:

- Carbide tipped cutter blades and centre pilot drill bit.
- Graduated in metric and inch sizes.
- Cutting capacity: 30 to 300mm(1" to 12").

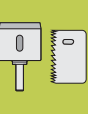

## E012 Diamond Grit Hole Saws, Gulleted

### FEATURES:

- Diamond coated cutting edge permanently bonded to a tough steel body provides the necessary clearance for cutting at high speeds.
- Long cutting life.

### APPLICATIONS:

- Cuts rapidly through reinforced plastics, tiles, marble, granite, glass and similar materials. Separate shanks required. In regular materials, such as wall tile, bar & point drill are available. But if you are going to cut some harder materials, such as marble, floor tile, glass etc., the point drill is forbidden.

## E017 Diamond Grit Core Bits

**ROUND**

**HEX**

### APPLICATIONS:

- For drilling into class 5 tile, marble, porcelain, granite, slate and glass.
- For use with handheld or press drills.
- Must be used wet.

### FEATURES:

- Strong brazed diamond bond ensures, easy drilling into the toughest materials.
- The hollow barrel of the bit creates a core that helps guides the drill and keeps it on track with no chance of skating, which improves safety to the user and material.
- The removal ejection slot pushes the core material out from the bit ensuring hole can be drilled without delay.
- Overall length: 55mm(2-3/16").

## E018 Position Locker of All Kinds of Diamond Hole Saws

Article NO. E0180001

### Portable Position Locker

Suitable for hole saws from 4mm to 12mm

Article NO. E0180002

### Portable Position Locker

Suitable for hole saws from 5mm to 76mm

Article NO. E0180003

### Professional Position Locker

Suitable for hole saws from 5mm to 90mm

## E019 Multi-Purpose Hole Saws

### APPLICATIONS:

- Multiple uses - cutting wood, mdf, plastics, ceramic wall tiles and building bricks.
- Suitable for use in mains and battery powered tools.
- Cutting depth up to 60mm(2-3/8").

### FEATURES:

- Carbide tipped teeth for outstanding cutting performance and product durability.
- Smooth cut, with minimal heat build up.
- Supported by a comprehensive range of arbors(order seperately).

## E020 TCT Hollow Core Bits

hex-shank arbor

SDS-plus arbor

pilot drill

### APPLICATIONS:

- To be used on hammer drills or rotary percussion drills in construction with corresponding arbors.
- For the professional use in drilling concrete, rock, masonry and bricks.

### FEATURES:

- Tungsten carbide tipped cutting teeth and pilot drill.
- Reduced friction due to drilling dust flute.
- High drilling performance due to corrugated base.

## E021 Diamond Core Bit Inductively Soldered

### APPLICATIONS:

- Universal diamond core drilling crowns - Inductively soldered.
- Diamond segments with conical cut for fast, easy and quiet drilling.
- Versatile for many types of material.
- Ideal for plumbers.

### FEATURES:

- Inductively soldered, resolderable.
- Universally usable for dry and wet drilling, hand held or with drill stand.
- For many types of material, e.g. steel-reinforced concrete, granite, limestone, sandstone, poroton, brickwork, asphalt.
- Connecting thread UNC 1-1/4 female.

## Technical advice for jig-saw and reciprocating blades

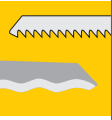

### Tooth spacing

In order to prevent the teeth from breaking off or the blade from snapping, at least three teeth should be cutting at the same time. The thickness of the work piece should determine whether a coarse-or fine-toothed saw blade is to be used.

The following information can be used as a rule of thumb for selecting the correct saw blades for the job in hand:

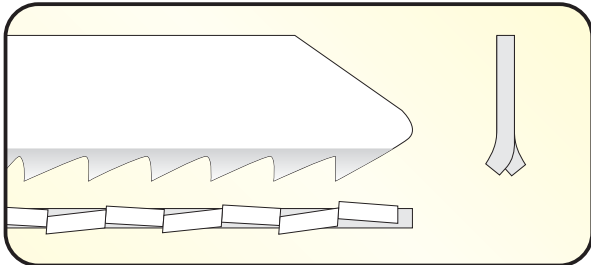

A tooth spacing of 0.8mm(1/32") to 1.2mm(3/64") is suitable for thin materials and fine cuts.

A tooth spacing of 2.4mm(3/32") to 4.8mm(3/16") is suitable for thin materials and coarse cuts.

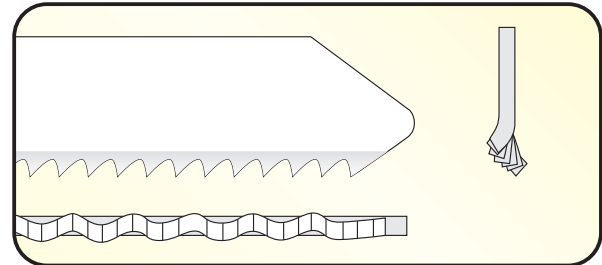

### Materials of blades

<b>HCS</b>	High alloy chrome vanadium CV steel for cutting softer materials such as wood, laminated particleboard and plastic.
<b>HSS</b>	High alloy high-speed steel, hardened by vacuum heat-treatment, for cutting metal, aluminum and non-ferrous metal.
<b>Bi-Metal</b>	This highly flexible, tough combination of HSS and HCS results in a blade suitable for the most demanding applications when there is a risk of breakage or when extreme flexibility and Versatility are required.
<b>TC</b>	Tungsten Carbide Saw blades for cutting abrasive materials such as tile, glass, cast iron and brick.

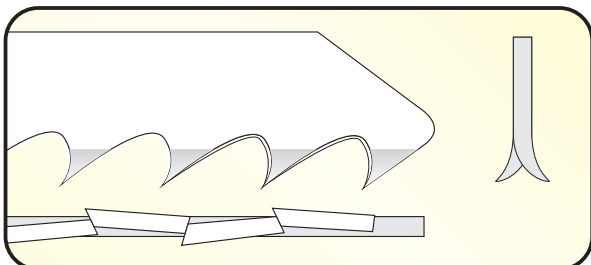

#### Milled and side set teeth

Blade with relatively rough cut and quick work progress cutting into hard and soft wood, Aluminum, plastics and non-ferrous metals.

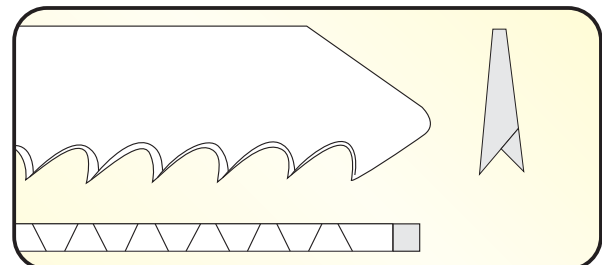

#### Milled and wavy set teeth

Blade for fine, straight cutting results into plywood, soft steel, Au Aluminum, plastics and non-ferrous metals.

#### Ground and side set teeth

Blade for clean, quick cuts in wood and plastic.

#### Ground and taper ground teeth

Blade with taper ground backing for precise, fine and clean cuts into wood and plastic.

# Handles all Materials and Applications

## MARKTOP UNIVERSAL HANDLE

**One-Hand Operation**  
The locking head can be drawn back with thumb and finger of the hand holding the tool. With the locking head withdrawn, all steel holders (B-C-D-E-F) can be used.

**Long Reach**  
The telescopic holder allows you to adjust the length and get to the most difficult-to-reach spots, quickly and effortlessly.

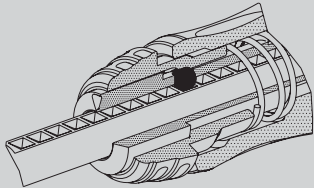

**Soft Grip**  
Gets narrower towards the base, giving improved grip. Provides the most comfortable grip. Even when applying force to clean up the most stubborn burrs.

**Removable Cap**  
The relevant blades can be stored inside the handle.

### FINE CROSSCUT INTERCHANGEABLE SAW BLADE

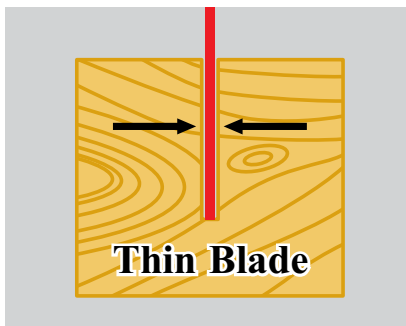

#### Product Description:

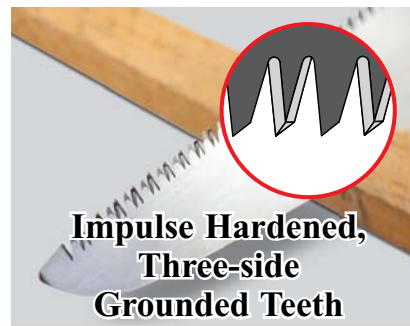

All blades are made and heat treated by Japanese machine. Ideal for fine crosscut PVC & ABS pipes, bamboo, logs, timbers and similar material. The thin blade, which removes the least material, making sawing easier, faster, and the most accurate. The specially ground, tri-edge teeth are impulse hardened to retain their sharpness. The blade can be used with interchangeable handle a&b. The blade locks securely in the handle, and the saw blade can be quickly disassembled for convenient storage. A blade guard protects the teeth when the saw is stored.
