Grout and Mortar Remover, Size:65mm(2-9/16")

- Routing grout, rasping away mortar or tile adhesive, joints out, tiles off –all with one accessory, very long lifetime

Tungsten Carbide grit coated sanding plate

- Ideal for removing mortar and tile adhesive
- Also suitable for removing carpet residues from a mineral surface

All round coated tungsten carbide grit tip (sanding/rasping finger)

- Removes joint material even in the most remote corners.
- Also suitable for sanding and rasping in tight gaps.

Tungsten carbide grit coated cutting edge

- For routing joints on wall and floor tiles.
- Also suitable for routing grooves in porous concrete and cutting particularly abrasive materials.

Feature:

The grout and mortar remover combines a segment blade with a delta blade in its drop-shape design. As a result, the grout and mortar remover can be used both to rout the grout out from around a damaged tile and also to rasp away the mortar or tile adhesive without having to change the accessory. This enables a new tile to be changed after tiling without any problems. The carbide-coated tip (sanding/rasping finger) also enables grout and mortar to be removed cleanly right into corners. The grout and mortar remover also excels in use due to its particularly long lifetime.

Application:

- Routing joints on wall and floor tiles
- Removing mortar or tile adhesive (e.g. when replacing damaged tiles)
- Removing joints in the smallest of corners with the tungsten carbide tip (sanding and rasping finger)

Routing joints on wall and floor tiles

Routing joints right into 90 degree corners

Removing mortar or tile adhesive – even right into corners
